PHASE 8 – PROJECT DEMONSTRATION

Auto Ticket Classification Using Flow Designer

Demonstration Objective

To demonstrate how ServiceNow Flow Designer automatically classifies and routes a service ticket.

Demonstration Steps

Step	Action
1	Log in to the ServiceNow instance using an authorized account.
2	Open the Ticket/Incident module.
3	Create a new sample ticket.
4	Enter the short description and detailed description.
5	Submit the ticket.
6	The Flow Designer trigger starts automatically.
7	The flow checks the ticket information against the predefined conditions.
8	The system identifies the appropriate ticket classification.
9	The ticket category/classification and other required fields are automatically updated.
10	The ticket is assigned to the appropriate assignment group.
11	Display the flow execution details or activity history.
12	Create another sample ticket to demonstrate a different classification path.

Expected Demonstration Result

The system should automatically classify the ticket and route it according to the configured rules without requiring manual classification for the demonstrated cases.

Conclusion

The demonstration shows how ServiceNow Flow Designer can automate repetitive ticket classification and routing activities, reducing manual effort and improving the efficiency of ticket management.
